

Fedex Flight Simulator Building

Memphis, Tennessee

FISHER ARNOLD

PROJECT EXPERIENCE

Fisher Arnold was the architect of record for the 3,000 SF addition to Module D Simulator Building at the FedEx Corporate Technical Complex Air Operations Training Center. The project involved adding one bay to the existing building to accommodate one new simulator, and completing the connections for another existing simulator space. The EVAC Training Room and the Cockpit Defense Training space were relocated and finishing out existing classrooms and computer rooms were also included.
