

City of Memphis Sewer Lift Station Assessments

Memphis, Tennessee

FISHER ARNOLD

PROJECT EXPERIENCE

In 2015, Fisher Arnold was awarded a contract to assess and inventory six sewer lift stations in the City of Memphis as part of their Sewer Assessment & Rehabilitation Program (SARP10), Administered by Black & Veatch. These lift stations were in the first year's priority list to be addressed. In 2016, seven more stations were assessed and beginning in 2018, Fisher Arnold is under contract to complete up to 71 more assessments. Our M/WBE partners for the contract were Powers-Hill Design and CHS Engineering. Each assessment consists of a full examination of each station including draw down tests, capacity analysis, determination of expected flow, electrical assessment, and rating the physical condition of all aspects of the station.
