FISHER ARNOLD

## PROJECT EXPERIENCE

Fisher Arnold designed and developed plans for interior renovations to the existing Lipman Campus buildings in order to better serve the needs of staff and students. The project was broken into two phases to allow the work to be completed during the vacant summer months when the facilities were in limited use. Renovations included the creation of new learning spaces, art room, new restroom facilities, and additional storage in existing classrooms. Necessary renovations to the existing electrical and mechanical systems to accommodate the new space utilization were also completed.
